

IBS

On Site Reviews

Identify. Create. Resolve.

Integrated Bulk Systems (IBS) is a leading engineering consulting, design, build and project management company with an industry reputation for performance, quality and reliability. Our comprehensive knowledge of bulk materials behaviour coupled with mechanical, electrical, structural, pneumatic and dust control engineering expertise means we offer a "one stop" solution.

IBS is committed to helping you and your business to find innovative solutions and we achieve this by offering a complimentary on site review of your existing Bulk Materials Handling Systems, Processes and Equipment.

Our engineering technician will visit your site - free of charge - and will perform an assessment for improvement opportunities (where applicable) on:

- ✓ **Maintenance requirements for existing plant and equipment**
- ✓ **Operating inefficiencies and bottlenecks**
- ✓ **Opportunities for upgrade and/or improvement in systems and processes**
- ✓ **Suggested inventory of critical spare parts**

The scope and time spent on site will be based on the size of your site and operations, which we will tailor with you prior to our visit. Our recommendations will then be presented to you on an obligation-free basis.

As an investment into the future of your company we appreciate it is essential to partner with a company that will work with you and we would like to offer our extensive knowledge and experience to help you achieve this.

Ask us how we can improve your processes today.
