

Modular Belt Conveyors

Identify. Create. Resolve.

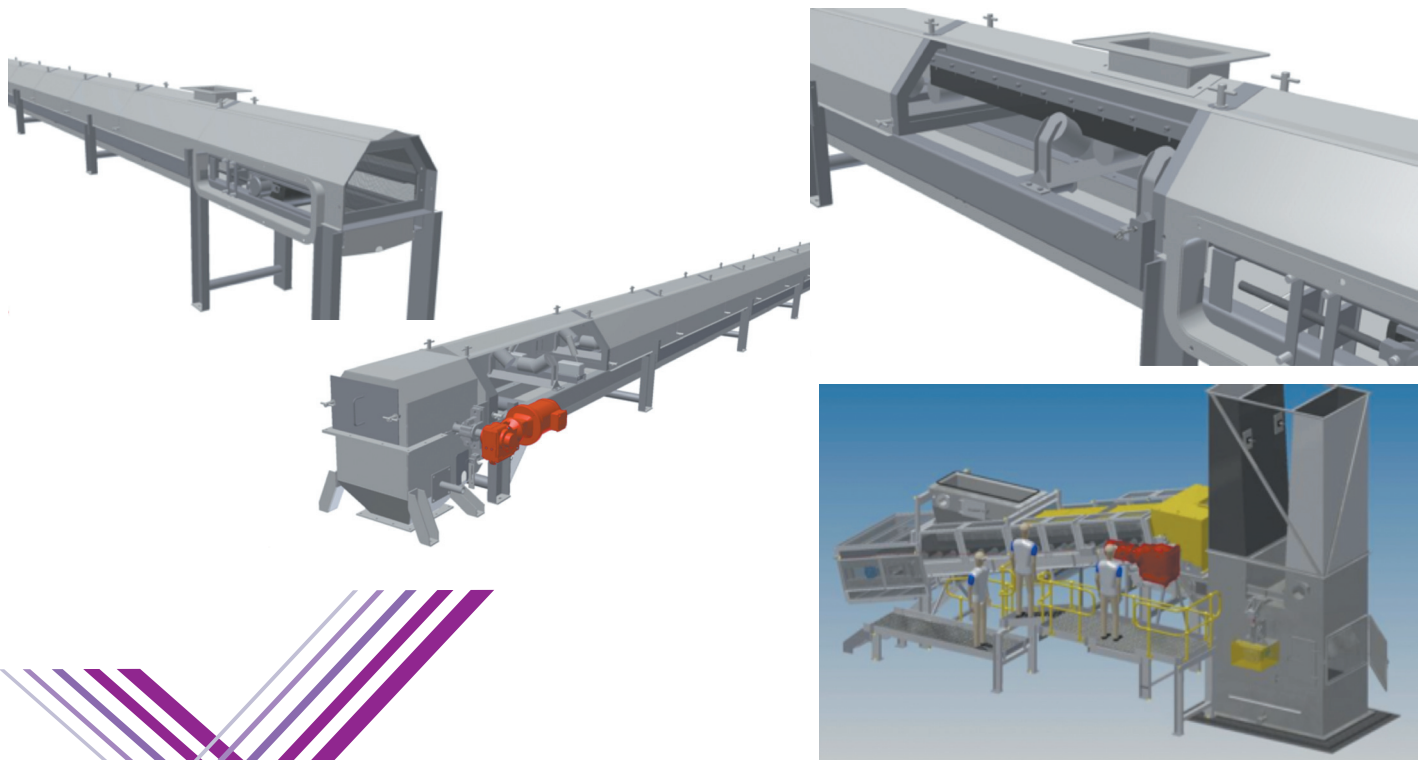

IBS has expanded its Belt Conveyor offering to include a range of economical Modular Belt Conveyors.

IBS's Modular Belt Conveyor are designed in fixed section lengths and belt widths to reduce delivery lead times, installation times with spare parts inventory and reduce your Total Cost of Ownership. IBS's Modular Conveyors are manufactured in line with the outstanding quality of our custom built conveyors that our clients have come to expect.

Standard modules are in 3m sections, with a shorter, custom module to ensure the conveyor suits your plant layout. Head and tail sections are designed to cover a wide range of throughputs for each belt size. They can be used in horizontal and inclined applications – support legs can be positioned as required. All conveyors can include covers.

A typical application is for narrow belt width, fully enclosed modular sample and dust return conveyors. All of our conveyors can be designed for Modularisation and our Standard belt widths include 350mm, 450mm and 750mm.
